

• Live on Robinhood Chain

Will it go **higher** or **lower**?

Hilo is the simplest bet on-chain. Pick a crypto token or tokenized stock, call its price higher or lower over a short window, and split the pot with everyone who called it right. No house on the other side.

HOW IT WORKS

Four taps to a position

Every round is a clean, symmetric bet. Winners are paid entirely from the losing side — Hilo never trades against you.

1

Pick a market

Choose from crypto — PONS, BTC, ETH — or tokenized stocks like NVDA, AAPL and TSLA, all on Robinhood Chain.

2

Call it

Higher or lower over the next minute. Watch the live chart and the crowd's odds before you commit.

3

Bet in WETH

Stake with WETH; it's converted to USDG the moment you enter, so your position is priced in a stable dollar.

4

Split the pot

When the round settles, everyone who called it right shares the entire pot in USDG. Claim straight to your wallet.

WHY HILO

Built to be fair by design

No house edge baked into odds, no oracle to trust, no way to quietly move the goalposts.

Parimutuel, not a house

Winners split the losers' stakes. Hilo never takes the other side of your bet, so we win when you play — not when you lose. We take a small, capped fee from the losing pot only.

Crypto & stocks

One clean bet across crypto — PONS, BTC, ETH — and tokenized stocks like NVDA, AAPL and TSLA on Robinhood Chain. Every market resolves from a battle-tested on-chain price source, so rounds are hard to manipulate.

Self-resolving on-chain

Each round settles from the asset's own on-chain price — a pool time-weighted average for tokens, and Robinhood Chain's native Chainlink feeds for majors and stocks — no reporter, no admin verdict.

Refunds when it's not clean

If a round is flat, one-sided, or a pool misbehaves, it voids and everyone gets their stake back. You're never forced into an unfair settlement.

ROADMAP

Higher or lower — crypto & stocks

Live at launch: higher/lower rounds on PONS, BTC and ETH. Tokenized NVDA, AAPL & TSLA are coming soon. Same clean bet, same parimutuel core — with more to call over time.

LIVE NOW

Crypto markets · PONS, BTC, ETH

Higher/lower rounds on PONS plus BTC and ETH on Robinhood Chain. WETH in, USDG out, parimutuel payouts — self-resolving from on-chain price (PONS from its Uniswap pool, BTC and ETH from Robinhood Chain's native Chainlink feeds).

● **COMING SOON**

Tokenized stocks · NVDA, AAPL, TSLA

Call tokenized NVDA, AAPL, and TSLA higher or lower alongside crypto, self-resolving from Robinhood Chain's on-chain Chainlink stock feeds. Coming soon — will follow market hours; subject to eligibility and local law.

● **BUILDING**

More RWA & open listings

Widening the tokenized-asset roster and letting projects apply to list their own token for a listing fee — curated to keep liquidity deep — plus more round lengths so there's always a live bet.

● **PLANNED**

Sports & real-world events

The same game on outcomes beyond price — over/under and higher/lower on real-world numbers — powered by a pluggable resolution layer on top of the same parimutuel core.

Call your first round

Pick a token, call it, and see if the crowd agrees. It takes about ten seconds.
